PROFESSIONAL SUMMARY

Recent Software Development Diploma graduate with hands-on experience building full-stack systems for real-world clients. Developed an integrated platform for a non-profit organization as capstone team lead, and consistently received top instructor recognition for code quality, organization, and adherence to industry best practices. Passionate about creative solutions, crafting well-structured software, and eager to grow within a collaborative development team.

EXPERIENCE

Volunteer Software Developer | [Society of Saint Vincent de Paul](#) 2024 – Present

Continuing volunteer contribution following capstone project delivery

- Design and extend a scalable, integrated platform built during diploma capstone, supporting ongoing development and operations.
- Provide technical support and training to admin staff using Microsoft Power Platform tools
- Collaborate with organization stakeholders to identify new feature needs and improvements

EDUCATION

Software Development Diploma | [Bow Valley College](#) 2024 – 2026

- Graduated with strong academic standing; recognized multiple times by instructors for exceptional code quality, creativity, and adherence to industry standards
- Coursework included: Full-Stack Web Development, Mobile Development (Android/Kotlin), OOP (C#, Java, C++), Database Design (SQL/MongoDB), Cloud & DevOps, Networking (Cisco), UI/UX, and Game Development (Unreal Engine)

PROJECTS

Non-Profit Integrated Management System | [Capstone Project — Team Lead](#) 2026

Full-stack platform built for a local non-profit organization

- Designed and developed a public-facing website enabling community members to sign up for assistance and volunteers to register and manage their availability
- Built an admin and volunteer back-office using Microsoft Power Apps, Power Automate, and SharePoint Lists to manage a hamper distribution system and other services
- Coordinated team development workflow using Git/GitHub, ensuring clean, organized, and maintainable code across the full system

Third Person Role Playing Game — Unreal Engine | [Individual Project](#) 2026

Praised by instructor as most unique and impressive seen

- Designed and built a game using Unreal Engine's node-based Blueprint visual scripting system
- Received recognition for creative design choices, code organization, and adherence to industry-standard practices. Submission far exceeded expectations.

Workspace Rental Web App | [Group Project](#) 2025

Praised by instructor for most organized student code

Built a full-stack workspace rental platform with user authentication, listing management, and MongoDB integration

- Ran on a local Node.js server; implemented organized MVC structure praised for clarity and maintainability

Connect 4 — WinForms C# with AI Opponent | [Team Project](#)

2023

Exceeded expectations significantly – other submissions were console-based solutions

- Built a fully featured Connect 4 game in C# WinForms, complete with home screen, game UI, animated token drops, two-player mode, and single player versus an AI opponent.
- Demonstrated strong OOP principles and initiative by delivering a polished desktop application beyond project requirements

Mobile & Desktop Application Concepts | [Ongoing Personal Projects](#)

2024 – Present

- Developed a portfolio of original app ideas, several explored as group projects in WinForms and Android Studio (Kotlin)
- Actively developing these concepts for future release on app stores; committed to taking projects from prototype to production

TECHNICAL SKILLS

Languages: JavaScript / TypeScript, C#, Java, Kotlin, PHP, C++, Python, HTML, CSS, SQL

Frameworks & Libraries: React / JSX, .NET / WinForms, Node.js

Databases: SQL, MongoDB

Cloud & DevOps: Microsoft Azure, Power Platform (Power Apps, Power Automate, SharePoint Lists), DevOps pipelines, Git / GitHub

Tools & Environments: Visual Studio, Android Studio, Unreal Engine, Cisco Packet Tracer

Strengths: Clean code architecture, industry-standard practices, creative problem solving, team collaboration, client-facing project delivery
